

Skin Types

Skin Condition	How to Tattoo
<ul style="list-style-type: none">- Big Pores- Severely Oily- Capillaries- Severely Dry- Severely Flaky	<ul style="list-style-type: none">- Choose an ink color that is a little darker than necessary, as ink on this skin type will fade quicker.- Clients with larger pores we recommend using warmer colors.- Usually bleed more- Start tattooing at a slower speed, increasing speed gradually depending on client comfort and how the skin is reacting.
<ul style="list-style-type: none">- Rosacea	<ul style="list-style-type: none">- These clients usually have very fair skin- Be gentle- Avoid bleeding- Start tattooing at a slower speed, increasing speed gradually depending on client comfort and how the skin is reacting.
<ul style="list-style-type: none">- Sun Damaged	<ul style="list-style-type: none">- Sun spots and freckles may be indicators that the skin is sun damaged.- Expect heavy bleeding- Start tattooing at a slower speed, increasing speed gradually depending on client comfort and how the skin is reacting.
<ul style="list-style-type: none">- Acne/ Pimples- Moles	<ul style="list-style-type: none">- Avoid tattooing any acne, pimples or moles- Do not pop as this may cause an infection- At touch up appointments the pimple will most likely be gone and we can tattoo this area.
<ul style="list-style-type: none">- Mature Skin	<ul style="list-style-type: none">- Choose a slightly lighter pigment- Healthy, mature skin will absorb color making the tattoo appear darker- Mature skin is usually thinner- Usually more dry- Higher risk of scarring- Avoid bleeding- Start tattooing at a slower speed, increasing speed gradually depending on client comfort and how the skin is reacting.
